<i>Preface to the Second Edition</i>	<i>vii</i>
<i>Preface to the First Edition</i>	<i>ix</i>
<b>1. Introduction and Concepts of Nanomaterials and Nanoscience</b>	<b>1</b>
What is the Dimension of Nanoregime? What is Nanoscience? What is Nanotechnology? 1	
Moore's Law (1965): An Amazing Forecast of the Emergence of Nanoelectronics 5	
<b>2. Different Types of Nanomaterials Including the Nanocomposites and Nanoporous Materials: Shapes, Structures and Properties</b>	<b>7</b>
Different Types, Shapes and Structures of Nanomaterials: 0D-, 1D-, 2D-Nanomaterials 7	
Characteristic Features of Some Representative Types of Nanomaterials 9	
Bulk or 3D-Nanomaterials 11	
3D-Nanomaterials or Bulk Nanomaterials: Nanocrystalline Materials, Nanocomposites, Nanoporous Materials including Metal-Organic Frameworks, Inorganic-Organic Hybrid Nanocomposites 11	
<b>3. Quantum Mechanics and Jellium Model of Nanosystems, Electrical and Magnetic Properties of Nanoparticles</b>	<b>29</b>
Quantum Mechanics of Low Dimensional Systems and its Applications to Nanomaterials 30	
Shapes and Sizes of the Nanoclusters: Electronic and Structural Magic Numbers 38	
Electrical Properties of Metal and Semiconducting Nanoparticles: Quantum Transport—Ballistic Conduction, Coulomb Charging ( <i>i.e.</i> Coulomb Blockade) and Tunneling Conduction 42	
Magnetic Properties: Magnetic Properties of the Ferromagnetic Metals in the Nanoregime: Magnetic Moment vs Cluster Size (in the Nanorange) for the Ferromagnetic Metals 49	
Magnetic Nanoparticles (MNPs) — Single Domain (SD) Ferromagnetic and Ferrimagnetic Particles: Superparamagnetism (SPM) 53	
<b>4. Properties of Nanomaterials — Special Reference to Surface Properties and Mechanical Properties</b>	<b>63</b>
Special Properties of Nanomaterials Due to Size Effect 66	
Comparison of the Properties of Gold at the Nano-State and Bulk-State 68	
Comparison of the Characteristic Properties of the Metal and Semiconductor Nanomaterials 69	
Surface Properties of the Nanostructured Materials and High Surface Energy Controlling the Different Properties of Nanomaterials 70	
Dependence of Mechanical Properties on Porosity and Grain Size of the Consolidated Nanocrystalline Materials 87	
Origin of the Hall-Petch Strengthening Called the Grain Boundary Strengthening 89	
<b>5. Stabilisation of Nanoparticles: Electrostatic and Steric Stabilisation</b>	<b>87</b>
High Surface Energy and Thermodynamically Unstable State of Nanoparticles 91	
Electrostatic Stabilisation of Nanoparticles 91	
Steric Stabilisation of Nanoparticles by using the Polymeric Substances 105	

Steric Stabilisation vs Electrostatic Stabilisation of the Nanoparticles 113  
 Electrosteric Stabilisation: Combination of Electrostatic and Steric Stabilisation 114

**6. Quantum Confinement Effect: Optical Properties of Semiconductor and Plasmonic Metal Nanoparticles and Quantum Wells** **110**

---

Quantum Confinement and its Effect on the Optical Properties of Semiconductor Nanomaterials like Quantum Dots (QDs) 115  
 Core-Shell (CS, *i.e.* core@shell) Composite Semiconductor Nanocrystals 128  
 Core-Shell Metallic Nanoparticles 131  
 Quantum Confinement and its Effect on the Optical and Other Properties of Quantum Wells (QWs, 2D-Nanomaterials) and Superlattices (*i.e.* Multiple Quantum Well Structures) 131  
 Surface Plasmon Resonance (SPR) and Optical Properties of Plasmonic Metallic Nanoparticles (Plasmonic Nanoparticles) 132  
 Hyperthermic/Photothermal Cancer Therapy and Cellular Imaging by Using the Plasmonic Gold Nanoparticles (GNPs) and Gold Nanoshells (GNSs) 141  
 Comparison of the Optical Properties of Nanoparticles (NPs) of Metals and Semiconductor Materials 144  
**Appendix 6A:** Origin of the Observed Colour: Absorption by Chromophores, Radiative Emission, Refraction, Blackbody Radiation, Scattering, Iridescent Colour by Photonic Crystals (PCs, Nanotechnology), Plasmonic Metallic Nanoparticles (Nanotechnology) 146

**7. The Carbon Nanoworld: Carbon-Based Nanomaterials—Fullerenes, Graphenes, Carbon Dots (CDs) and Nanotubes** **138**

---

Fullerenes—Buckminsterfullerene: Carbon Clusters and Allotropic Forms of Carbon 160  
 Graphenes 175  
 Carbon Nanotubes (CNTs) 180  
 Supramolecular Chemistry (*i.e.* Guest-Host Chemistry of Fullerenes and CNTs) 191  
 Graphene Synthesis: Top Down and Bottom-Up Approach 191

**8. Synthesis of Nanomaterials** **168**

---

Synthesis of Nanomaterials: Top-Down and Bottom-Up Approach 192  
 Bottom-Up Approach: Solution-Phase and Vapor-Phase Synthesis 193  
 General Features of Vapor Phase Synthesis of Nanomaterials: Vapor Phase Synthesis of Nanoparticles 215  
 Thin-Film (*i.e.* Epitaxial Layer) Growth Techniques: Vapor-Phase Deposition – Physical Vapor Deposition (PVD) and Chemical Vapor Deposition (CVD) 219  
 Diamond Synthesis by CVD 231  
 Atomic Layer Deposition (ALD) 232  
 Langmuir-Blodgett (LB) Films: A Technique to Transfer the Monolayer and Multilayers of Amphiphilic Molecules onto a Solid Substrate from Water-Air Interface 235  
 Anisotropic Growth: Vapor-Liquid-Solid (VLS) Growth and Solution-Liquid-Solid (SLS) Growth of One-Dimensional Nanomaterials like Nanowires or Nanowhiskers, Nanorods and Nanotubes 237  
 Solution-based Chemical Methods of Synthesis of Metal Nanoparticles (NPs) and Metal Oxide Nanoparticles 245  
 Solution-based Chemical Methods of Synthesis of Semiconductor Nanoparticles and Core-Shell Nanoparticles 261  
 Nanoparticle Synthesis Inside the Reverse Micelles Acting as the Nanosized Reaction Vessels Limiting the Dimension of Nanoparticles to be Synthesised 268  
 Sol-Gel Process: Synthesis of Oxide Nanoparticles (NPs) and Other Oxide Nanostructures 270  
 Electrospinning: Synthesis of Nanofibers, Nanocomposite Fibers and Nanoporous Deposits 279

---

Template-Based Synthesis of One-Dimensional Nanomaterials: Growth of Nanomaterials like Nanorods, Nanowires and Nanotubes within the Nanopores of Templates	281
Synthesis of Nanoparticles by Ball-Milling — A Top-Down Approach	284
Top-Down Approach: Lithography — Photolithography	285
<b>9. Characterization Techniques of Nanomaterials</b>	<b>262</b>
<hr/>	
Important Instrumental Techniques for Characterization of Nanomaterials	288
Scanning Probe Microscopy (SPM)	289
Electron Microscopy: Optical (Light) Microscopy vs Electron Microscopy; Scanning Electron Microscopy (SEM) and Transmission Electron Microscopy (TEM)	303
X-Ray Diffraction (XRD) Methods — Principle and Applications	320
Small Angle X-Ray Scattering (SAXS)	332
Energy Dispersive X-Ray Spectroscopy (EDS or EDX), Auger Electron Spectroscopy (AES), Electron Energy Loss Spectroscopy (EELS) and X-Ray Photoelectron Spectroscopy (XPS)	332
X-Ray Absorption Spectroscopy (XAS): XAFS, XANES, NEXAFS and EXAFS	333
<b>Appendix 9A: Quantum Mechanical Tunneling (QMT)</b>	335
<b>10. Applications of Nanomaterials and Nanotechnology</b>	<b>312</b>
<hr/>	
Introduction: Nanotechnology and the World's Attention	340
Some Important Nanomaterials and Their Potential Uses	341
Applications of Nanomaterials: Representative Examples	342
Challenges and Possible Hazards in the Use of Nanomaterials and Nanotechnology	356
<b>Review Questions</b>	<b>360</b>
<b>Bibliography</b>	<b>377</b>
<b>Index</b>	<b>379</b>
